

JOIN OUR MISSION
TO DEVELOP
EDUCATIONAL SPACES
FOR CHILDREN IN
SANTA MONICA, OCUILAN STATE OF MEXICO

PROBLEM

- ♥ The earthquake that took place on September 19th has left a lot of buildings affected and many structures unreparable.
- ♥ In rural communities of the State of Mexico schools will be demolished.
- ♥ Many of these communities do not have sufficient resources to recover all the damage caused.
- ♥ This has become a natural disaster and a social problem that stops educational and community development.

PROJECT OBJECTIVE

- ♥ After evaluation of the damages there is a need to rebuild educational spaces to accommodate the children.
- ♥ This will help aid the community to recover from the natural disaster and offer children a safe, environmentally friendly and low-cost space that will allow them to continue their education.
- ♥ According to UNICEF the lack of education creates a higher chance, after only a few months, of children dropping out of school. This has recently increased significantly.

THERE IS A NEED OF 15 CLASSROOMS FOR MORNING AND EVENING USE.

Elementary School "Lic. Benito Juárez" is on the verge of collapsing and unsafe. It will have to be demolished.

Authorities of SEIEM (Educational Services Integrated to the State of Mexico) and the City Hall agreed that the provisional school should be at the Santa Monica Sports located 1km from the current school.

The facilities of the Santa Monica Sports Unit have bathrooms for girls and boys, sports courts, parking, lighting by means of solar cells, water and electricity.

The student community consists of 448 students. The school provides educational services during the morning and evening.

EDUCATIONAL COMMUNITIES ARE IN A PROCESS OF SOCIAL RECONSTRUCTION

- Due to the damaged infrastructure both schools have declared themselves in a state of demolition.
- The response of school authorities and government is unclear, they do not know how long it will take for the relocation and reconstruction of these schools. It is said to be estimated at least three years.
- We are trying to create awareness around this terrible environmental tragedy that has misplaced communities and destroyed these children's lives. We want to help rebuild these schools and communities through strength, care and unity.

COST ESTIMATE

We are currently evaluating different models of classrooms while working with communities to implement social reconstruction processes.

Once SEPs and state governments reconstruct the primary school, these classrooms may be devoted to other uses such as community education or a non-profit organisation.

To enable the project to build classrooms for the school of Lic. Benito Juárez in Santa Monica Ocuilan **the estimated cost is:**

- 📍 Number of classrooms: **15**
- 📍 Cost per class **9,500 EUR** (approx)
- 📍 Total cost of classrooms: **135,000 EUR**
- 📍 Freight: **4,500 EUR**
- 📍 Other expenses: **4,500 EUR**
- 📍 Total cost: **144,000 EUR**
